

# Online Event Booking & Smart Ticketing Platform

User Flow & Operating Guide | how to use every screen, role by role

## How to read this guide

Every step below is something you click or type on screen. Follow the numbered boxes in each diagram from left to right, then continue on the next row.

Nothing here needs technical knowledge - if you can use a shopping website, you can operate this platform.

The platform has three kinds of users. Read only the section for the role you are in: **Attendee** (pages 3-4), **Event Organizer** (pages 5-6), **Admin** (pages 7-8). Page 9 is a one-page quick reference for everyone.

## 1. Open the platform

The platform runs in a normal web browser (Chrome, Edge, Firefox or Safari) on a laptop or a phone - every screen adapts to the smaller width.

| Where                                | What to open                                                                 |
|--------------------------------------|------------------------------------------------------------------------------|
| On the computer running the software | <b>http://localhost:5173</b> - open this in the browser                      |
| On a phone on the same Wi-Fi         | <b>http://&lt;computer-ip&gt;:5173</b> (for example http://192.168.1.5:5173) |
| Who can see what without logging in  | Anyone can browse events. You need an account only to book, sell or manage.  |

## 2. The three roles

| Role            | What this person does                                                                                           | Where they land after login                          |
|-----------------|-----------------------------------------------------------------------------------------------------------------|------------------------------------------------------|
| Attendee        | Finds events, books tickets, pays, carries a QR ticket, cancels or asks for a refund                            | The public site, with <b>My bookings</b> in the menu |
| Event Organizer | Creates venues and events, sets ticket prices, tracks sales, scans tickets at the gate, receives payouts        | <b>Organizer dashboard</b> (left-hand menu)          |
| Admin           | Approves organizers, watches events and payments, decides refund disputes, pays organizers, sets the commission | <b>Admin console</b> (left-hand menu)                |

## 3. Accounts to sign in with

These demo accounts are already in the system, so the software can be tried immediately. Change these passwords before using the platform for real.

| Role            | Email                  | Password    |
|-----------------|------------------------|-------------|
| Admin           | admin@eventbooking.com | Admin@12345 |
| Event Organizer | organizer@demo.com     | Demo@12345  |
| Attendee        | attendee@demo.com      | Demo@12345  |

To create a fresh account instead: click **Sign up** on the top right, then choose **Book tickets** (attendee - usable at once) or **Sell tickets** (organizer - waits for admin approval).

## The whole platform at a glance

The three rows are the three roles. Read each row left to right: that is the order of screens that person uses. The dotted arrows show where one role's action shows up in another role's screens.

### The one rule to remember

An organizer cannot sell anything until an **admin approves** their account, and an event is invisible to attendees until the organizer presses **Publish event**. If an event seems to be missing, one of those two steps has not happened yet.

## Role 1 - Attendee: booking a ticket

This is the flow for anyone buying a ticket. Steps 5 and 6 are alternatives: you either choose a quantity of tickets, or pick exact seats on a map, depending on the event.

### What to do on each screen

| Screen                   | What you do there                                                                                                                                                                                               |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Home                     | See featured and upcoming events. Use the search box, or the city list, to jump straight to <b>Explore events</b> .                                                                                             |
| Explore events           | Narrow the list with the filters: category, city, date, price range, and <b>Featured only</b> . Sort by date, price or best match. Active filters appear as chips you can remove one by one.                    |
| Event page               | Date and time, venue and address, the organizer, duration, the cancellation policy and the ticket prices. Press a ticket type's + and - buttons to choose how many you want, then <b>Continue to checkout</b> . |
| Seat map (seated events) | Tap the seats you want - they turn into your selection, and already-sold seats are not clickable. On a phone, swipe sideways to see the whole map.                                                              |
| Checkout                 | Your name, email and phone are pre-filled and can be edited - the tickets are sent to this email. Check the payment summary, then press <b>Pay</b> . A countdown shows how long your seats are held.            |
| Payment screen           | Choose a method and press <b>Pay</b> . The booking is confirmed and you are taken straight to the tickets.                                                                                                      |
| Booking confirmed        | "You're going!" with one QR ticket per attendee. Tap a QR to enlarge it for scanning, or download the ticket PDF and the invoice.                                                                               |
| My bookings              | Tabs for <b>Upcoming</b> , <b>Past</b> and <b>All bookings</b> . Open any booking to see its tickets, order summary and payment details.                                                                        |

#### Paying in this demo

The platform is running in test-payment mode. On the payment screen you simply press **Pay** and the booking is confirmed - no card or UPI details are ever asked for. There is also a **Simulate failure** switch, so a failed payment can be shown too.

## Attendee: cancelling or asking for a refund

Every event carries its own cancellation policy, shown on the event page and on the booking. If the policy still allows cancelling, it happens instantly. If it does not, an admin can still be asked.

| Situation                                                      | What you do                                                                                                                                |
|----------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| The cancellation window is still open                          | Open the booking and press <b>Cancel booking</b> . The refund shown in the policy is returned automatically and the seats go back on sale. |
| Cancelling is no longer allowed, but you have a genuine reason | Open the booking, press <b>Request a refund</b> and explain the reason. An admin reads it and decides; you get an email either way.        |
| The organizer cancelled the event                              | Nothing to do - the booking is refunded in full and marked <b>Event cancelled</b> .                                                        |

### Good to know as an attendee

- **Your tickets never expire from the app.** They stay under **My bookings > Past** after the event, together with the invoice.
- **One QR per ticket.** If you booked four tickets, there are four QR codes - give each person their own, or show them one after another at the gate.
- **The QR works offline.** Download the ticket PDF beforehand in case the venue has no signal.
- **The checkout timer is real.** If you leave the payment screen for too long, the seats are released for someone else and you simply book again.
- **Wrong email on a booking?** The tickets still live under **My bookings** in your account - you do not need the email to get in.
- **Keep the order number** (for example EB260917TPTB9P) handy when asking for support.

#### Account settings

Your name, phone and password are under **Account settings** in the top-right menu. **Log out of all devices** there if you ever signed in on a shared computer.

## Role 2 - Event Organizer: from sign-up to tickets on sale

An organizer account is reviewed by an admin first. Until then you see an "approval pending" screen and cannot create events - that is normal, not an error.

### What to do on each screen

| Screen                            | What you do there                                                                                                                                                                                     |
|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Sign up (Sell tickets)            | Your name and login details, plus the organization name, city and contact number that attendees will see.                                                                                             |
| Approval pending                  | Nothing to do but wait. The page tells you the status; an email arrives when the admin decides.                                                                                                       |
| Dashboard                         | Today's numbers: upcoming events, tickets sold, revenue, and shortcuts to the events that need attention.                                                                                             |
| Venues & layouts                  | <b>Add venue</b> - name, address, city and capacity. Open a venue to build a <b>seat layout</b> : add sections, then rows and how many seats each row has. Skip layouts entirely for standing events. |
| Events > New event                | Title, description, category, date and time, the venue, and whether seating is <b>general admission</b> or a seat layout. Press <b>Create draft</b> - it stays private.                               |
| Event > Tickets tab               | <b>Add ticket type</b> for each price band (for example Gold, Silver): name, price, quantity, and when sales open and close.                                                                          |
| Event > Overview tab              | A readiness checklist (details, ticket types, start time, banner). Upload the banner image here, and press <b>Publish event</b> when every item is ticked.                                            |
| Bookings / Attendees / Sales tabs | Who booked, the guest list, and how many tickets sold per type - with a CSV download for the gate.                                                                                                    |

#### Before you press Publish

The venue, the seating type and the seat layout **cannot be changed after publishing**, because people will already hold tickets for specific seats. Prices, quantities and the description can still be edited. If sales must be paused later, use **Close ticket sales** on the Overview tab instead of cancelling the event.

## Role 2 - Event Organizer: event day and after

On the day of the event, the same dashboard becomes the entry gate. Any phone or laptop with a camera can be a scanner - no extra app to install.

### What the scanner tells you

On a green result the attendee's name and ticket type are shown, so they can be checked against an ID if you want to. On an amber result the screen also tells you when, and at which gate, the ticket was used before.

### Useful details on the check-in screen

- **Gate name** - type something like "Gate A" so every scan is recorded against that entrance.
- **Ticket code** - if a camera is unavailable or a QR will not focus, type the code printed on the ticket and press enter.
- **Offline mode** - switch it on for gates with poor internet. The ticket list is kept on the device, scanning keeps working, and the scans upload automatically once there is signal again.
- **This session** - the running list of everyone you just scanned, newest first, with live counts of scanned versus sold.
- The camera only works on **localhost** or an **https** address - that is a browser security rule. On a plain http address over Wi-Fi, use the ticket-code box instead.

### After the event: getting paid

| Screen             | What it shows                                                                                                                                                                                        |
|--------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Earnings & payouts | Ticket sales, the platform commission deducted, refunds, and what you are owed. Each payout shows <b>Pending</b> until the admin transfers the money, then <b>Paid</b> with a bank reference number. |
| Analytics          | Sales over time, best-selling ticket types, and what share of sold tickets actually walked in through the gate.                                                                                      |
| Account settings   | Keep your <b>payout details</b> (bank account and IFSC) up to date here - the admin pays into that account.                                                                                          |

## Role 3 - Admin: running the marketplace

The admin console is the left-hand menu at **/admin**, grouped into Marketplace, Finance and System. Start at **Overview** - it shows what is waiting for you.

### The decision every new organizer waits on

*until one of these two buttons is pressed, the organizer can do nothing*

### Marketplace menu - who and what is on the platform

| Menu item  | What you do there                                                                                                                                                                                                                                        |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Overview   | Counts of organizers awaiting approval and open refund requests, plus platform revenue, bookings and tickets for the last 30 days.                                                                                                                       |
| Organizers | The <b>Awaiting approval</b> tab lists new applications with their organization details. <b>Approve</b> lets them sell; <b>Reject</b> needs a reason, which is emailed to them. You can also suspend an organizer or give one a special commission rate. |
| Users      | Everyone on the platform, filtered by role or status. Suspend a user to block their login, reactivate to restore it, or create another admin account.                                                                                                    |
| Events     | Every event from every organizer. <b>Feature</b> puts an event on the homepage; <b>Block</b> hides it from attendees immediately while keeping already-sold tickets valid.                                                                               |
| Categories | Add a category, hide one from organizers, or delete an unused one. A category that already has events cannot be deleted - hide it instead.                                                                                                               |
| Bookings   | Search any order by number, attendee or event, and open it to see its tickets and payment.                                                                                                                                                               |

## Role 3 - Admin: the money screens

Everything about money lives in the **Finance** and **System** groups of the menu. Nothing here changes a booking - it only records, decides and transfers.

| Menu item          | What you do there                                                                                                                                                                                                                       |
|--------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Payments & refunds | Two tabs: every payment taken, and every refund sent, with the reason and status of each. This is the place to answer "where is my money?" questions.                                                                                   |
| Refund requests    | Attendee disputes. Open one, read the reason, then set an amount and <b>Approve</b> (it may be part of the total, and you can choose whether to cancel the tickets), or <b>Decline</b> with a note. The attendee is emailed either way. |
| Payouts            | What each organizer is owed for events that have finished. Press <b>Generate payouts</b> , transfer the money from your bank, then <b>Mark paid</b> with the transfer reference so the organizer can trace it.                          |
| Settings           | The platform commission percentage, plus the activity log of every admin action with who did it and when.                                                                                                                               |
| Analytics          | Revenue, booking value, tickets sold, refund rate and attendance across the whole platform, for any date range.                                                                                                                         |
| Email log          | Every email the platform queued, and whether it was sent - useful when someone says they never got their ticket.                                                                                                                        |

### A sensible daily routine

- Open **Overview** and clear the two counters at the top: organizers awaiting approval, and open refund requests.
- Skim **Events** for anything newly published that looks wrong, and feature the ones worth promoting on the homepage.
- Once a week, press **Generate payouts**, transfer the money, and mark each payout paid with its reference.
- Change the commission on **Settings** only when you mean to - it applies to bookings confirmed from that moment on, never to past ones.

#### What an admin should not have to do

Tickets, invoices, confirmation emails and automatic refunds all happen on their own. An admin only steps in for the three things above: approving organizers, deciding refund disputes, and paying organizers after their events.

## Quick reference

### Where everything lives

| Attendee menu                                             | Organizer menu                                                                         | Admin menu                                                                                                                                     |

### Words used on screen

| Word              | What it means                                                                                                                |
|-------------------|------------------------------------------------------------------------------------------------------------------------------|
| Draft / Published | A draft event is private to the organizer. Published means attendees can find and book it.                                   |
| General admission | No fixed seats - you just buy a quantity of tickets.                                                                         |
| Ticket type       | A price band such as Gold or Silver, each with its own price and quantity.                                                   |
| Hold / countdown  | The few minutes your seats are reserved while you pay. If the timer runs out, the seats go back on sale and you start again. |
| Order number      | The booking reference, like EB260917TPTB9P - quote it in any support question.                                               |
| Commission        | The platform's share of each ticket sale; the rest is the organizer's earnings.                                              |
| Payout            | One transfer to an organizer for one finished event.                                                                         |
| Blocked           | An admin has hidden the event from attendees.                                                                                |

### If something looks wrong

| What you see                                    | What to do                                                                                                               |
|-------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------|
| A new event is not in the attendee list         | The organizer has not pressed <b>Publish event</b> yet, or an admin has blocked it, or its start time has passed.        |
| An organizer cannot create an event             | Their account is still awaiting approval, or it was rejected or suspended - check <b>Admin &gt; Organizers</b> .         |
| The seat map will not let me pick a seat        | That seat is sold or held by someone else, or ticket sales for the event are closed.                                     |
| My checkout timer ran out                       | The booking is released. Go back to the event and select the tickets again.                                              |
| The camera will not open on the check-in screen | Allow camera access when the browser asks, and use a localhost or https address. Otherwise type the ticket code instead. |
| The payouts page is empty                       | Payouts only appear for events that have already finished.                                                               |
| Signed out unexpectedly                         | Log in again - you are returned to the page you were on.                                                                 |

#### One-line summary

**Admin approves an organizer >> organizer publishes an event >> attendee books and pays >> attendee shows the QR ticket >> organizer scans it at the gate >> admin pays the organizer after the event.**
